

Chest : AP supine (a1)

- A group of cysts of variable sizes at medial side of left lower lobe. The largest cyst is above 2 cm size.
 - Mildly increased volume of the left lung with flattening of left hemidiaphragm.
- Intact diaphragm.

Chest : Left lateral (a2)

- Posterior location of the cysts with anterior displacement of pulmonary vessels in lower lung.

DDX: CCAM type 1, and pulmonary sequestration.

CT chest (a3): Axial plane of lower chest, using lung window.

- A group of small cysts in posterior basal segment of left lower lobe.

(Other images (not shown) using mediastinal window do not show systemic artery supply to this area of the lung.)

DX: CCAM type 1
